

Sennheiser at ISE 2021 Digital

Sennheiser reveals new software and Standalone Mode for MobileConnect; highlights TruVoicelift technology for TeamConnect Ceiling 2

Participating in the digital edition of the world's biggest AV event on June 1 and 2, Sennheiser is focusing on its audio solutions for corporate and education environments, in particular its TeamConnect Ceiling 2 microphone with TruVoicelift technology and the MobileConnect BYOD streaming solution, which now offers even more possibilities in the field of assistive listening over Wi-Fi thanks to a new software version and Standalone Mode.

New features for the Sennheiser MobileConnect Wi-Fi streaming solution ensure a new level of operational simplicity, regardless of whether a few individual units or a large network of devices are in use.

MobileConnect's new Standalone Mode allows higher education institutions to quickly integrate MobileConnect into their existing Wi-Fi network for assistive listening support. "The benefits of the new Standalone Mode are its easy installation as well as the low integration and IT effort required," says Jakub Kolacz, product manager for MobileConnect. This plug-and-play mode is especially attractive for smaller systems and first installations, yet the solution is still fully scalable, with each MobileConnect station providing two audio streams for up to 100 users.

The new update for the free MobileConnect Manager caters to large and software-controlled MobileConnect set-ups. Version 1.3.0 of the software will make workflows for large networks more convenient with a new Manager dashboard and API interface.

The MobileConnect Manager dashboard now gives ample system information at a glance, such as status messages for troubleshooting purposes, information about software updates, statistics for active MobileConnect Stations and streaming channels as well as the possibility to download a log of system status messages.

With the MobileConnect API, Sennheiser opens MobileConnect for connection to

third-party systems. For example, IT managers are now able to have QR codes for the streaming channels automatically displayed on digital room signage solutions. "The API allows AV & IT managers to optimise their university's workflows and add more convenience both for the team and for users," explains Jakub Kolacz.

Another highlight at ISE Digital is TeamConnect Ceiling 2. As well as being a leading microphone solution for distance learning and conferencing audio, TeamConnect Ceiling 2 has recently been enhanced to ensure clearly audible in-room audio for education and business settings, thanks to its free TruVoicelift feature.

"With the latest TeamConnect Ceiling 2 firmware update and the 4.3.0 version of the Sennheiser Control Cockpit app, the touchless ceiling mic array now doubles as a voicelift microphone and ensures perfect audio all the way to – and from – the back row," says Jens Werner, Portfolio Manager in Sennheiser's Business Communication Division.

Easily controllable features make for a pleasant and clear listening experience, among them an advanced frequency shift algorithm that delivers a few crucial extra dB of gain and a feedback prevention mute function. Also, during pauses in speaking, a noise gate will be activated that mutes TeamConnect Ceiling 2 to prevent any background noise from being amplified.

Via the Sennheiser Control Cockpit app, priority zones and advanced exclusion zones can be created to define areas where audio is predominantly picked up and to exclude noise sources, respectively.

Do not miss the Sennheiser events at ISE Digital

Digital Learning Tech Channel

- June 2 at 14:45 CEST: TruVoiceLift & Camera Control with the Sennheiser TeamConnect Ceiling 2 beamforming ceiling microphone
- June 2 at 15:20 CEST: Sennheiser Mobile Connect – Plug and play audio streaming over Wi-Fi featuring a new Standalone Mode

Innovation & Demo Showcase Channel

- June 2 at 14:30 CEST: Sennheiser TeamConnect Ceiling 2, the beamforming ceiling microphone – now with TruVoiceLift
- June 2 at 17:00 CEST: New Sennheiser digital wireless microphone series

Another highlight that Sennheiser is keen to draw attention to is an interview with Stephen Dishon, Development Team Manager of the University of Edinburgh. This will be broadcast from the ISE Main Stage on June 1, at 14:40 CEST. Stephen will describe the university's AV requirements and how he and his team have prepared for hybrid learning.
