

Sensaphonics 3DME

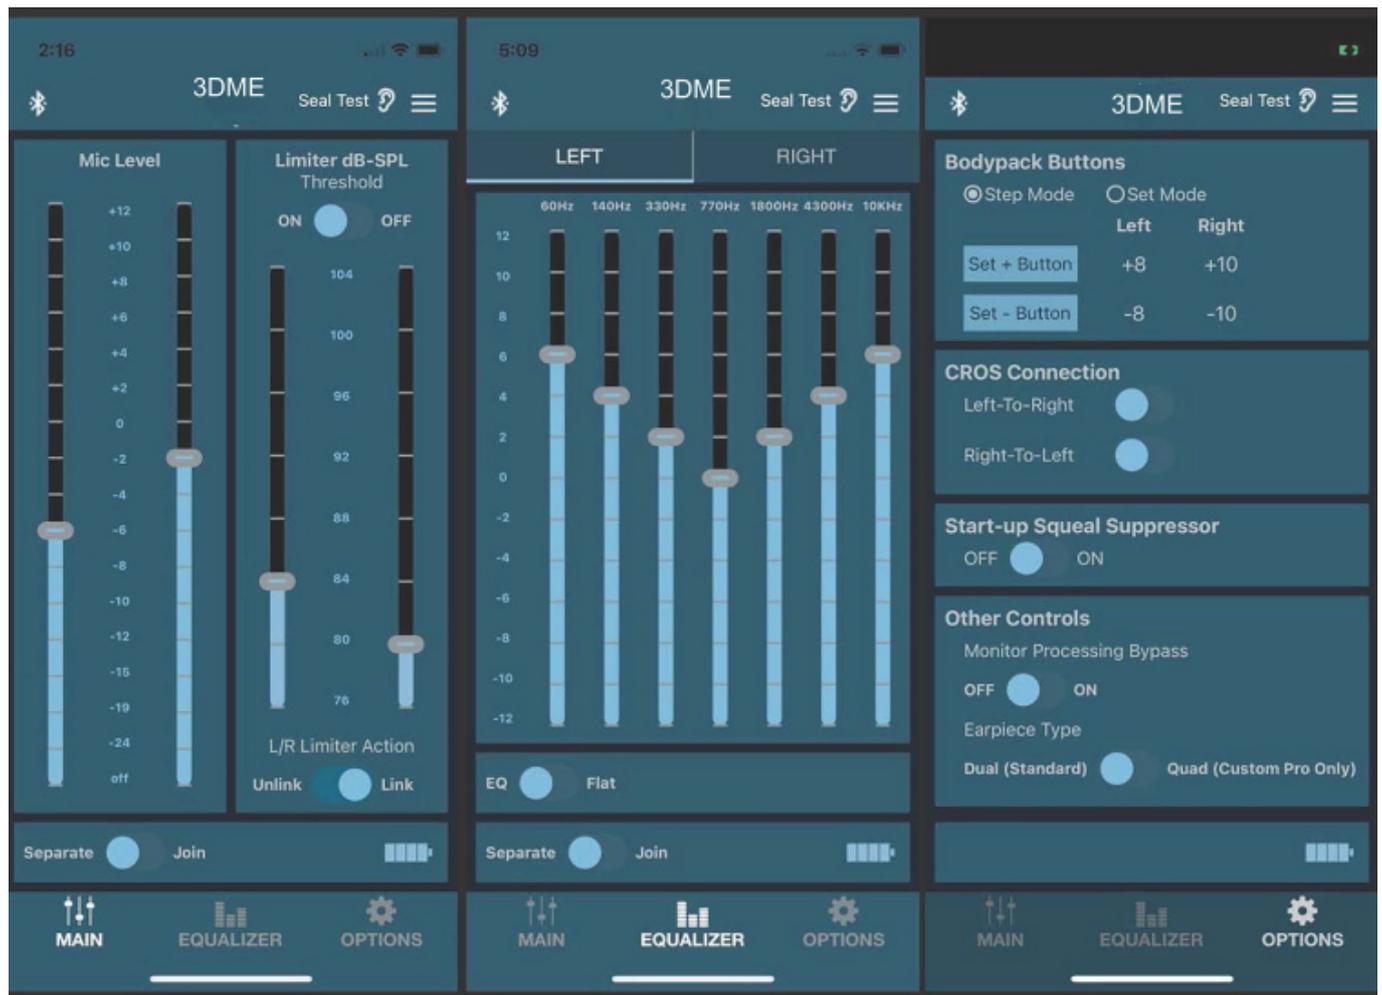

Sensaphonics, a designer and manufacturer of custom-fit in-ear monitors, earplugs, pro audio electronics, and the pioneer of 3D Active Ambient in-ear monitoring, today announced that the 3DME In-Ear Monitoring System is now shipping directly through Sensaphonics and its authorized resellers worldwide.

The 3DME system continues to redefine live monitoring by combining high-fidelity in-ear sound with adjustable ambient input via built-in MEMS microphones. This proprietary 3D Active Ambient technology enables musicians, engineers, and audiophiles to hear both their performance and their environment with exceptional clarity and control. Available in high-performance universal fit configurations, 3DME brings immersive, natural monitoring to stages, studios, and personal listening environments alike.

“With 3DME now shipping once again directly from Sensaphonics, we are excited to bring customers an even more educative support system for their hearing health journey,” said Dr. Michael Santucci, Au.D., founder and president of Sensaphonics. “From the beginning, 3DME has been about protecting hearing while making live sound more natural and inspiring. This next chapter ensures users receive the highest level of expertise, service, and innovation directly from the company that created 3DME Active Ambient monitoring.”

Sensaphonics 3DME Now Shipping
