

SSL Live V6 Software Update

Solid State Logic [ISE Hall 4, Stand 4N605] will showcase its latest advancements in touring, installed sound, broadcast audio, and content production workflows during ISE 2025, held at Fira Barcelona, Gran Via, between February 4th and 7th. SSL will debut its highly anticipated SSL Live V6 software update, to be demonstrated on the flagship L650 console. Attendees of ISE will also have the opportunity to explore the versatile System T Flypack TCA and the latest hybrid production tools designed for music and content creation.

At ISE 2025, SSL will deliver exclusive demonstrations of its renowned SSL Live production platform via the flagship L650 console, showcasing the full power of the SSL Live ecosystem. Designed for large-scale productions, the L650 offers unmatched processing power, intuitive control, and pristine sound quality, making it the ideal solution for tours, installed sound, and event spaces. Paired with SSL's advanced SuperAnalogue Dante and MADI-based I/O, the system provides seamless integration and reliability.

The new SSL Live V6 software update brings acclaimed studio tools, used on countless hit records, to the live stage. The Fusion effect rack emulates five circuits from SSL's award-winning Fusion hardware, delivering rich tonal colour. The Path Compressor Mix Control introduces advanced parallel compression directly to channels and buses, while updates to the TaCo app allow engineers to remotely control the acclaimed SSL Sourcerer and Blitzer modules. Further, enhanced Dante

Routing Modes provide seamless system-wide integration across ShowFile Saved and Outside of ShowFile setups.

Built on an open, flexible architecture, SSL Live allows operators to configure workflows for any application. Advanced routing capabilities make it equally suited to touring setups - supporting up to eight SuperAnalogue MADi stageboxes via the Blacklight II Concentrator interface - or installed sound systems with full Dante routing for multi-room configurations. All this versatility is now accessible through SSL Live Bundles, a cost-effective solution providing complete systems optimised for touring, installed sound, and church audio. For those interested in enhancing content creation, streaming and music & audio production, SSL will also have the latest in hybrid production tools on display; UF1 and UC1 controllers, the new range of SSL 2/2+ MKII audio interfaces, and much more.

At ISE 2025, Solid State Logic will host guest presenters sharing their expertise with SSL Live consoles. Alex Carretero, sound engineer for Latin Grammy Award-winning producer Alizzz, will discuss how he brings studio-quality sound to the stage using the SSL Live L100 Plus console. Ramón Sendra, sound engineer at El Molino (Barcelona), will explore immersive audio production for event spaces, highlighting the integration between SSL Live and the d&b Soundscape system, which offers advanced spatial audio control for unforgettable live experiences.

SSL looks forward to meeting its customers and partners at ISE 2025 and will be offering live demonstrations during each day of the show.
