Tascam Sonicview 16dp & 24dp

Tascam has introduced two new variants of its powerful multi-touchscreen digital consoles: the Sonicview 16dp and Sonicview 24dp. The DP models are designed to offer even greater reliability in professional environments thanks to their redundant power supplies. Tascam cites broadcasting environments and integrated systems as examples of situations in which failure of the audio signal must be avoided at all costs.

With an additional DC input of 14 to 27 volts, the consoles enable seamless switching in the event of a mains power failure, providing peace of mind for demanding productions. Tascam also offers a matching power supply unit (PS-P2450) which is also suitable as a backup power supply for the SB-16D stage box.
