

TOA announces New Product at ISE 2025

TOA Electronics Europe announces its participation in Integrated Systems Europe (ISE) 2025 in Barcelona. From February 4 to 7, 2025, the Japanese audio solutions provider will showcase an array of innovative sound systems and cutting-edge speaker technologies at booth 7D130 in Hall 7, setting new standards for audio solutions across various industries.

TOA will unveil two new speaker series designed for diverse applications. One highlight is the new Long Range Horn Array Speaker Series, engineered for outdoor mass notification and disaster prevention. This unique design focuses on delivering clear, intelligible voice announcements over long distances while minimizing vertical sound dispersion and reducing noise interference. Building on 15 years of expertise in disaster prevention in Japan, the innovative horn configuration ensures precise sound direction with minimal spillover, making it the ideal solution for critical scenarios where reliable communication is paramount. These speakers will be available in the EMEA market from spring 2025.

Ideal for indoor and outdoor applications requiring sleek design and exceptional sound quality, the new F-Box Design Speaker Series offers versatile solutions. These speakers meet diverse installation needs, are available in three sizes in black or white, including an 8-inch subwoofer, and will also be offered in an EN-54 certified version. TOA will also preview two groundbreaking systems currently under development. The compact Voice Alarm System, VM-4000, available in both wall-mount and rack-mount editions, is designed to meet the demands of modern voice alarm systems.

Additionally, TOA will showcase a new IP-based PA and intercom system, the CX-1000 Series. This series bridges the gap between building access applications, internal communication, emergency communication and public address solutions.

TOA announces New Product at ISE 2025

Thursday, 16 January 2025 16:20

All elements work in one harmonic ecosystem that is open to integrate SIP and ONVIF devices. ISE Visitors will get an exclusive first look at these prototypes and experience their features through live demonstrations.

In addition to product showcases, TOA invites visitors to experience hands-on demonstrations of its cutting-edge technologies. TOA's sound specialists will be on-site to provide detailed insights and discuss tailored solutions for specific project requirements. TOA warmly invites all attendees to booth 7D130 in Hall 7 to explore its latest innovations and connect with the team.
