

Ultimate Ears Pro New Sensaphonics Reseller

Fellow manufacturers of in-ear monitors, Sensaphonics and Ultimate Ears Pro, have announced that Ultimate Ears Pro is now a reseller for dB Check Pro, the brand agnostic tool for calculating the sound pressure levels reaching the ears of end-users of in-ear monitors (IEMs) and headphones. “By offering dB Check Pro directly to their customers,” says Sensaphonics founder and President Michael Santucci, Au.D., “Ultimate Ears Pro is demonstrating their commitment to the hearing health of IEM end-users. We are delighted that UE Pro is now raising the awareness of dB Check Pro as an aid to its own initiatives to promote the safe use of IEMs and hearing health awareness.”

“We are committed to helping our customers listen safely,” says Brian Geller, Head of Sales and Marketing of Ultimate Ears Pro. “dB Check Pro provides the most effective way for users of our IEMs to get a realistic measure of how loud they are listening. It’s a great complement to our products.” dB Check Pro, developed by custom-fit in-ear monitors, earplugs and pro audio electronics manufacturer Sensaphonics, is the only device on the market that provides IEM and headphone end users with calculated at-ear real-time and average sound pressure level estimates (dBA SPL) of both monitoring level and measured stage/environmental noise. The unit also calculates safe listening durations based on NIOSH and OSHA

guidelines, empowering users to make informed decisions about their listening habits.

Designed to work unobtrusively in-line with any IEM or headphone monitoring system, the dB Check Pro's patented technologies make it an essential tool for musicians, engineers, and live production professionals. One device can be easily shared among multiple users, making it a smart investment for touring groups, house-of-worship praise bands, production teams, and rehearsal spaces, alike. dB Check Pro's expanding software database currently features over 170 models of IEMs and headphones from 15 major brands, including the sound profiles of the entire line of UE Pro Custom IEMs.

Available now for \$299.00 (USD), the dB Check Pro can be purchased direct from Ultimate Ears Pro and Sensaphonics.
