URC and BluOS Enhanced Integration

URC, a Company with expertise in global smart residential and commercial automation, and BluOS, the premium multi-room hi-res audio platform, have announced an enhanced and expanded partnership that seamlessly integrates BluOS-enabled devices with URC's Total Control and High-Definition Audio (HDA) systems. Through this continued collaboration, homeowners can enjoy unparalleled high-resolution audio experiences throughout their entire smart home with robust control and automation.

The advanced integration ensures effortless management of the BluOS ecosystem, including music selection, volume control, and multi-zone audio distribution, all from URC interfaces. With BluOS integration, URC’s voice commands extend beyond system control to seamless music management, allowing simple operation for activating playback, selecting tracks and adjusting settings in any room. Combined with Total Control, which executes professionally programmed scenes across lighting, climate control and entertainment, end users can create the perfect ambience for entertaining, relaxing, or focused listening.

This robust integration means very little effort is required from dealers once the module is added, streamlining installation and maintenance. It also offers dealers

remote access to troubleshoot, monitor, or adjust the Total Control system and configure BluOS integration. With streamlined programming and a unified interface, this boosted collaboration delivers elevated whole-home audio and smarter living for discerning homeowners. Visit the Bluesound booth #3425 at CEDIA Expo 2025 to discover more.
