Waves Audio ProLink Integration

Waves and Midas announce ProLink integration for Midas HD96 consoles and Waves SuperRack. ProLink is Waves' forward-thinking console integration protocol - and with the latest update of the Waves SuperRack SoundGrid and SuperRack Performer platforms, it is now available for the Midas HD96, bringing a faster, more powerful, and more seamless workflow with Waves.

Many Midas HD96 users rely on Waves SuperRack and Waves plugins as part of their console workflow. With this update, that relationship becomes even more powerful. ProLink establishes a direct connection between the Midas HD96 and SuperRack - making the console itself the primary interface for controlling plugins, without the need for an external keyboard and mouse.

ProLink Integration for Midas HD96 and SuperRack enables the following benefits:

- Snapshot Synchronization - Firing a snapshot on the console automatically recalls the corresponding SuperRack snapshot, keeping sessions locked in-step throughout the show.
- Session Management - Loading a show on the Midas HD96 loads the corresponding SuperRack session, with session naming and saving fully integrated.
- Plugin Control - Selected Waves plugin parameters can be controlled directly using the console's Touch and Turn encoder, delivering hands-on, tactile plugin control from within the familiar Midas environment.
- PFL/Solo Focus - Soloing a channel on the console automatically brings the corresponding plugin rack to the front of the SuperRack screen, keeping your focus exactly where it needs to be.Global Tempo Sync - Time-based Waves plugins, including delays and tremolos, automatically sync to the console's global tempo in real time.

"We are excited to bring ProLink integration to the Midas HD96 platform," says Noam Raz, General Manager of Waves' Live Sound division. "For many engineers using SuperRack alongside Midas consoles, this update creates a more seamless and intuitive workflow - with direct console control designed for the pace and demands of live production."

“We’re excited to work with Waves across the Midas HD series, says Midas Brand Leader Pete Sadler. “With the introduction of Waves ProLink on the Midas Heritage platform, it’s now easier than ever for engineers to move seamlessly between onboard FX, Waves processing, and SuperRack workflows. This integration is all about delivering greater flexibility, faster control, and a more intuitive experience for users in demanding live environments.”

With ProLink, the Midas HD96 becomes a natural extension of Waves SuperRack. Engineers spend less time switching between screens and more time mixing — with direct encoder control of plugins, automatic rack naming, and a unified session environment that keeps everything in sync from soundcheck through the final bow.
