WORK PRO INTEGRA

WORK PRO has expanded its INTEGRA Digital Signal Processing matrix with the introduction of INTEGRA 16S, a 16-channel unit that gives users full control of their audio output across multiple zones. On show for the first time at InfoComm 2024 (booth C9512), this exciting addition to the INTEGRA range comes as a direct response to customer demand for a higher channel count. Offering 16x16 balanced analogue 1/O; Line/Mic inputs with +48V Phantom power; adaptive feedback control; automatic noise suppression and gain compensation; 4 GPIO ports and a USB interface for play and record, the INTEGRA 16S offers unparalleled levels of flexibility. With this unit, professional installers can set parameters and fine-tune every aspect of the sound, thus optimising the listening experience and providing exceptional results in any environment.

Like its smaller sibling the INTEGRA 8S, INTEGRA 16S is delivered with INTEGRA S, a free and powerful native parameter management software that includes controls for input and output gains, expander, compressor, parametric equalisation, limiter and anti-feedback on each channel. Its visual matrix and automix module ensure that it is adaptable for many different types of installation.

For the first time at InfoComm, WORK PRO will also be showing the WC 3U Wall Control unit with an OLED screen and built-in rotary button/push button, which is designed for simple and complete programming through the INTEGRA 8S and 16S and INTEGRA Plus software. Housed in an elegant aluminium casing, the Wall Control unit also features TCP/IP and UDP communication capabilities, making it easy to integrate into a variety of systems. Additionally, it is powered via PoE (Power over Ethernet), which simplifies installation.

WORK PRO WC 3U

"INTEGRA Digital Signal Processing opens up a world of creative possibilities, giving users the ability to individually configure and correct audio in multiple zones depending on what audio processing is required to produce the best sound," says Juan Jose Vila, CEO of WORK PRO's parent company Equipson. "The technological superiority of these products, combined with their extraordinary levels of flexibility, means that the right product can be chosen for any application, from the smallest installation with very few areas to process to larger installations with a variety of different areas, such as department stores, supermarkets, gyms, conference rooms and hospitality."

All products in the INTEGRA range will be on show at InfoComm. These include the 8-channel INTEGRA 8S, the new 16-channel INTEGRA 16S the 16-channel INTEGRA 16+ and the 32-channel INTEGRA 32+. The more advanced INTEGRA 16+ and INTEGRA 32+ models feature DANTE digital inputs and are supported by INTEGRA Plus native parameter management software, which is also free. This powerful software incorporates all the features of INTEGRA S, along with additional functions such as noise gate, parametric equalisation up to 31 bands, Ducker and Voice Tracking for synchronising video cameras.

Both INTEGRA S and INTEGRA Plus software solutions are highly intuitive and easy to use thanks to a user-friendly visual interface that allows installers to see configurations in real time. In addition to a plethora of useful control features, all of the products in the INTEGRA Series can be controlled from mobile devices via an APP for iOs and Adroid.
