K-array Koral KO102 & KSCAPE CORE

Italian manufacturer of professional audio solutions, K-array, will showcase the depth of its residential portfolio on a dedicated booth (#2E190) at this year’s ISE show. From home cinema and entertainment to bespoke solutions for the luxury marine market, the K-array residential booth is set to be a showstopper for custom install professionals visiting the show.

K-array will be presenting the much-anticipated Koral KO102 column loudspeaker (pictured above), the newest addition to its residential portfolio. Koral is specifically designed to deliver professional performance in visually sensitive spaces, including the home environment. Combining controlled directivity with a minimal footprint, Koral provides the output of a larger system whilst remaining visually discreet.

The KO102 employs six 3-inch mid-frequency drivers and a dedicated high-frequency unit in a sleek, compact frame. An onboard switch lets integrators choose between two operating modes: Pure Array or Point Source, ensuring the product can be enjoyed to its full potential in any number of acoustic environments. In residential settings, such as home cinemas, Koral can serve as a center channel when configured in horizontal mode, or be used as left, right and surround channels in multichannel setups. A range of fully weather-rated finishes, including customizable RAL colors or premium metal treatments, ensures Koral fits elegantly into any home environment.

A further addition to the residential solution offering is KSCAPE CORE, an evolution of the RAIL ecosystem and an intelligent control system engineered to deliver seamless integration and simplified management of both audio and lighting within the KSCAPE ecosystem. RAIL offers integrated lighting and audio, bringing audio and lighting controls into a single controller, eliminating the need for third-party workarounds. The flexibility of the CORE is demonstrated in its installation options: it can be integrated by mounting directly onto the RAIL body using a dedicated bracket, or it can be used as a remote control unit connected via dedicated cabling. In residential settings, CORE offers autonomy and comfort, allowing users to personalize lighting scenes and audio experiences to match their daily routines, moods, or special moments.

Alongside Core and Koral, other highlights on the booth include the Dolomite full-range loudspeaker system, the award-winning Lyzard range, and the popular ultra-flat Vyper series. “Our product development roadmap and focus of the past year has been on creating products that complete the K-array ecosystem,” explains Lorenzo De Poi, brand manager at K-array. “The aim is to provide installers and designers with a full portfolio of solutions to choose from under one trusted brand offering the high-performance and elegant aesthetics that K-array is renowned for.”
