sE Electronics V7 MC1 & V7 MC2 Chrome

The V7 MC1 and V7 MC2 have become widely respected wireless capsule upgrades for performers, engineers, houses of worship, production companies, and rental providers around the world. Now, we're introducing a new way to match that trusted performance to your setup. Now, both models are available in a striking Chrome finish. Already a popular look throughout the V Series lineup, Chrome brings a polished, premium aesthetic to the V7 MC1 and V7 MC2 while retaining the natural vocal sound, excellent rejection, and road-ready durability users have come to expect. There have been no changes whatsoever to the capsules' performance or specifications. This is a finish update only. However, these versions will carry new SKUs and UPCs.

Designed for performers and engineers who want to get more from their existing wireless systems, the V7 MC1 and V7 MC2 combine sE's proven V Series capsule technology with the convenience of a wireless handheld transmitter.

Key features include:

Phoca PDF

- Compatible with select Shure and Sennheiser wireless handheld transmitters
- Based on sE's proven V Series capsule technology
- Supercardioid pickup pattern for excellent isolation and feedback rejection
- Natural vocal reproduction with clear, consistent performance
- Patented integrated shockmount helps reduce handling noise
- Road-ready all-metal construction built for demanding live environments
- NEW Chrome finish offers a premium visual alternative to the existing black models

The V7 MC1 and V7 MC2 Chrome are ideal for performers, engineers, houses of worship, production companies, and rental providers looking to enhance their existing wireless systems without changing the sound they rely on.
