ACE Studio EASTWEST Sounds Partnership

ACE Studio, a company with expertise in artificial intelligence technology for musicians, today announced a strategic partnership with legendary virtual instrument developer EASTWEST Sounds, a multi-award-winning pioneer in music software. The collaboration brings together ACE Studio’s cutting-edge AI technology with EASTWEST’s world-class virtual instruments, empowering computer-based musicians to achieve superior results faster and more intuitively than ever before.

EASTWEST Sounds is widely recognized as one of the most influential companies in music software history, with over 100 industry awards, including three NAMM TEC Awards for “Best Musical Instrument Software.” Its instruments are used by top composers, producers, and artists across film, television, games, and commercial music. ACE Studio is designed for expressive performance rather than auto-song generation. Unlike tools that automatically create full tracks, ACE Studio focuses on precise vocal control, editable AI instruments, MIDI-based performance, and professional-grade expression tools - making it an accurate production tool for real musicians, not a one-click generator.

The partnership focuses on advancing software-based music creation, leveraging ACE Studio’s proprietary AI technology to enhance workflow, realism, and creative expression. By harnessing state-of-the-art sounds from EASTWEST and combining them with intelligent AI-driven tools, musicians can dramatically reduce production time while achieving polished, professional-grade results. “Our mission at ACE Studio is to remove technical barriers and let musicians focus on creativity,” said

Joe Guo, Co-Founder and CEO at ACE Studio. “Partnering with EASTWEST - one of the most respected names in virtual instruments - allows us to pair elite sound quality with AI innovation that makes music creation faster, easier, and more inspiring.”

This collaboration is designed specifically for modern, computer-based musicians, offering smarter tools that adapt to creative intent while maintaining the depth, authenticity, and sonic excellence professionals demand. From composers working under tight deadlines to independent producers seeking high-end results, the combined technologies aim to redefine what’s possible in music software.

“EASTWEST has always been about pushing the boundaries of sound,” said Doug Rogers, Founder and Producer at EASTWEST Sounds. “By teaming up with ACE Studio, we’re embracing AI as a powerful creative ally - one that enhances workflow without compromising musicality.” Additional details on upcoming software integrations and product offerings will be announced in the coming months.
