ADDAC System Mixology Eurorack Module

ADDAC System announces the new ADDAC815 Mixology Eurorack module, following the introduction of its Mixology pedal in December. Mixology brings powerful routing and unconventional mixing capabilities into the world of Eurorack - in a modest 10HP footprint. This module serves as both a dual effect chain router and feedbacker, and can also function much like a 3x3 matrix mixer, enabling multiple routing configurations within a very compact set up.

Mixology's powerful routing features unleash unconventional and creative control over effects ordering, muting and much more. Two FX loops enable users to route inputs into the dry input signal, or the opposite return for parallel, series, or inverted ordering of FX. Meanwhile, two feedback loops allow each FX return to feed back into its own or the opposite send, for individual or series feedback. There are individual route switches for FX1 and FX2, and a dedicated FX Mix knob enables crossfading between FX1 and FX2. Meanwhile, the Wet | Dry knob crossfades between the FX and the dry input signal. Two dedicated Attenuverter knobs enable CV control over wet / dry mix and FX1/FX2 crossfading.

By using its crossfading and feedback controls, surprising and unexpected FX results can be achieved, for instance by feeding the Return control back into its own Send. Depending on your choice of FX and how these are ordered and routed, this is a module that rewards exploration and experimentation. For instance, when used with reverb or delay, the feedback knob can create seemingly infinite spatial washes that make even the most basic dry signal more sonically complex. Users

can experiment with both parallel FX processing and live looping. For live looping, Mixology is especially useful because it provides the option to record loops with or without effects, while still enabling placement of that same chain of effects after the recorded loops.

The ADDAC815 Mixology module is available now and priced at just €160.
