

Arturia MiniFreak Vocoder Edition

Arturia's MiniFreak Vocoder Edition is officially available as of Thursday, 5th June. The six-voice hybrid polysynth you know - dual digital engines, gritty analog filters, deep modulation and sequencing - now speaks for itself with powerful Vocoder FX, a detachable 30 cm gooseneck mic, and a fearless white-and-orange skin that stands out in any setup. Unleash your voice, distort reality, and dive headfirst into chaos - MiniFreak returns in a fearless white-orange skin, armed with a vocoder that bends sound to your will.

New Features:

- Ext In Vocoder reshapes any external signal with MiniFreak's engine.
- Self Vocoder lets you use the Vocoder FX on synth engine sounds.

Swap between Clean, Vintage, Narrow, or Gated flavours, then tweak the three FX controls for anything from Daft-Punk gloss to hyper-resonant textures in seconds. A bright white chassis, orange accents, and a 30 cm gooseneck mic/stand turn MiniFreak into a self-contained performance hub - plug, play, and freak out.
