

Arturia AstroLab Update 1.5

AstroLab's latest update expands its sonic capabilities and live workflow with 7 new instruments from V Collection 11, new performance tools like Program Change Output and ARP lock, and improved playability - all in a computer-free setup built for the stage.

AstroLab is a standalone 61 or 88-key stage keyboard that combines Arturia's advanced virtual synthesis with hands-on control and deep integration with Analog Lab. It's built for musicians who want studio-grade sound and stage-ready performance in one powerful, portable instrument.

What's New with 1.5?

- More Instruments: Play 7 new V Collection titles on AstroLab, including MiniBrute V, Jup-8000 V, SEM V3, and more.
- Smarter Performance Tools: Send program changes to external gear, lock your ARP and Chord settings while browsing, and transfer playlists
