

Arturia AstroLab 2.0

Arturia introduces AstroLab 2.0, a major free update for its stage keyboard range. The new Sound Edit view brings each instrument's key parameters to AstroLab's front panel, where musicians can shape them using the four macro knobs. The update also expands AstroLab's stage palette with 60+ new sounds, including an acoustic grand piano, brass, strings, and basses. Refinements to the playing experience and everyday workflow make AstroLab even more capable on stage.

AstroLab 2.0 puts deeper sound editing directly at your fingertips and brings a new collection of sampled instruments to the stage. Shape your sounds from the front panel, then explore expressive piano, punchy brass, strings, and basses built for live performance.

The new Sound Edit view gives each instrument its own pages of parameters, including envelopes, filter and glide. Each page maps to AstroLab's four macro knobs, making it easy to fine-tune a sound or take it further:

- A broader stage palette: Discover 60+ new sounds, led by Pure Grand Clean, an acoustic grand piano sampled across eight velocity layers. The collection also brings funk and orchestral brass, pop strings, and upright and electric basses to AstroLab.
- Performance refinements: AstroLab 2.0 improves sampler polyphony, playing feel and visual feedback. Easier preset browsing, Analog Lab linking and updating help keep the focus on your performance.

AstroLab 2.0 is available as a free update for AstroLab 37, 61 and 88 users from October 6, 2026.
