

# Arturia Bus TRANSIENT

Bus TRANSIENT is a streamlined attack shaper that gives producers and mix engineers instant, musical control over the transient and body of their sounds. From tighter drums to punchier mixes, Bus TRANSIENT brings definition and polish without the complexity.

Designed for speed and clarity, Bus TRANSIENT combines multi-band controls with real-time visual feedback to deliver impactful results - whether you're refining instruments, shaping drums, tightening one-shots or enhancing the mix bus. Fine-tuned attack and body controls give you precise, instant punch and weight with multiband precision. Accentuate a snare, tighten boomy bass, or add body to a thin-sounding instrument in seconds.

A built-in soft/hard clipper manages peaks and adds character. Keep your source loud and forward without introducing unwanted harshness - adding warmth and saturation when driven. A streamlined interface and real-time visual feedback mean you get results fast. No menu-diving or guesswork required; every control is designed for an immediate production flow. Jump straight into powerful presets to save time fine-tuning. From practical mixing templates to creative transformation, find the perfect starting point for any sound.
