Arturia MiniLab 3 V1.1 Firmware Update

Thanks to feedback from the global Sound Explorers community, Arturia introduces the MiniLab 3 V1.1 Firmware Update. Enhanced features, creative improvements, and performance fixes - out now and free for MiniLab 3 users.

New features:

- Set MiniLab 3’s encoders to Absolute or Relative, with multiple modes to choose from
- Lock MiniLab 3’s pads in Shift mode for instant access to transport controls at all times
- MiniLab 3 can now use HUI, MCU, or its own scripts for integration, including a new Cubase script - ready to control any DAW
- MiniLab 3 will automatically use its internal clock if no DAW clock is detected, so you’re always in time
- Rename your custom programs, change MiniLab 3’s sleep mode settings, and more
- A number of tweaks that make your DAW workflow easier, as well as useful bug fixes
