Arturia Efx Motions

Efx Motions, turns the simplest idea into music that evolves and captivates; bring boring, static stems to life with moving filters, distortion, beat repeating, and more; make mixes feel more spacious, responsive, and alive.

Draw curves and envelopes to animate any sound, create automations and polymetric motion to change the feel of your music, and move from stutter to riser to mix widener in a few clicks. Use movement to make different elements in your project interact and bounce off each other, making things sit better, evolve dynamically, or dramatically alter your sound. Stack and weave multiple FX together, trigger beat repeats, and modulate parameters all at once; Efx MOTIONS is somewhere between a full FX chain and an instrument in itself.
