Arturia AudioFuse 16Rig Update 2.0

With update 2.0, users will be ready to tap into the latest trends in immersive music, film, and gaming production - whether they are an experienced studio owner or an aspiring creator looking for the most affordable route into spatial audio.

Set your studio up for the future with up to 16 channels of immersive monitor control using any of the analog or ADAT outputs available on AudioFuse 16Rig.

- Up to 16 Channels of Immersive Audio: Configure Dolby Atmos (up to 9.1.6), Auro-3D, 5.1, 7.1, Quad, or any custom format using our flexible monitor management system.
- Precise Speaker Alignment: Individual volume trim, up to 20ms per-speaker delay, and global lip-sync delay to keep audio and video perfectly matched.

Discover AudioFuse 16Rig Update 2.0

- Comprehensive Bass Management: Customize crossover points and slopes per channel; instantly enable/disable bass management.
- Group Monitor Tools: Easily mute/solo groups of speakers, and engage MUTE, DIM, REF (reference level reset), or BM (bass management on/off) at
