

Arturia MiniFreak V

In 2022, Arturia launched MiniFreak, a powerful & expressive hybrid synth keyboard. Continuing the brand's legacy of bridging the gap between hardware and software, it came accompanied by MiniFreak V, a software mirror-image of MiniFreak: for 2023, Arturia is making MiniFreak V available as a standalone virtual instrument plugin.

Striking the perfect balance between analog & digital, order & chaos, beauty & beast, MiniFreak V is a virtual instrument fusing digital sound engines with modeled analog filters, spontaneous modulation, playful sequencing, and rich stereo FX like nothing before it.

Discover endless sonic sweet spots, from the curious to the graceful to the ultra-fat, courtesy of MiniFreak V's experimental architecture and spontaneous workflow.

- Like-for-like sound: Enjoy indistinguishable hybrid sound in your DAW & as a standalone plugin with MiniFreak V's dual engines, modeled analog filters, and lush stereo FX - a Freaky all in one.
- Express & automate: Make MiniFreak V work for your sound and your projects by sequencing, automating, or programming expression in your DAW.
- Deep sound design: Tap into MiniFreak V's like-for-like modulation matrix, fire up multiple instances, and create a plethora of wild & inspiring sounds without hardware limitations.
- MiniFreak integration: Seamlessly exchange and edit presets, control MiniFreak V's parameters, and perform expressively by connecting MiniFreak with MiniFreak V.

Arturia's MiniFreak V softsynth now available for all users
