Music hardware brand Ashun Sound Machines (ASM) introduces the new interactionsimplifying ASM Manager desktop application alongside the stage and studio reliability-improving Firmware 2.2 update for its critically acclaimed line of Hydrasynth digital wave morphing synthesizers - effectively enhancing their performance and usability in the process of doing so - as of May 15...

As a dedicated desktop application designed to simplify how users interact with their Hydrasynth, ASM Manager replaces ASM's original Hydrasynth Manager with a

refreshed UI (User Interface) and smoother workflow, making sound management more efficient and intuitive. Incorporated features include LIST VIEW for streamlined patch browsing; sorting by Patch name, Category, and Color; searching by Patch name; color tagging directly within the browser; organising by Favorites; integrated UPDATE DEVICE facility for simplified firmware installation; and EXPORT LIST of patch banks as Microsoft Excel list files for easy referencing. It is fair to say, then, that ASM Manager enhances everyday interaction with Hydrasynth - whether organising sound libraries, performing updates, or customising Favorites.

Firmware 2.2 focuses on performance enhancements, improved system stability, and adding seamless compatibility with ASM Manager. Indeed, it ensures that every Hydrasynth model delivers consistent and reliable operation on stage and in the studio. Since the original Hydrasynth Keyboard and Hydrasynth Desktop debuted in 2019, followed by the flagship Hydrasynth Deluxe and compact Hydrasynth Explorer in 2021, the Hydrasynth family has earned a reputation for its sonic depth, expressive performance capabilities, and forward-thinking interface. Its latest updates continue to refine that foundation.

Acting as a fresh source of inspiration to accompany its introduction of the new interaction-simplifying ASM Manager desktop application alongside the stage and studio reliability-improving Firmware 2.2 update, ASM is offering Hydrasynth Special Edition Patch Bank as an exclusive collection of 128 new patches created by some of the top sound designers in the industry. It showcases the expressive power and versatility of the Hydrasynth engine, covering a wide range of sonic territory from ambient textures to bold, playable leads, and is available to download from the website below for free, ready to import into ASM Manager itself.

Hydrasynth Keyboard, Hydrasynth Desktop, Hydrasynth Deluxe, and Hydrasynth Explorer are available to purchase via ASM's growing global network of dealers/distributors at a price of \$1,299.00 USD; \$799.00 USD; \$1,799.00 USD; and \$599.00 USD, respectively, and a price of €1,899.00 EUR; €1,119.00 EUR; €2,499.00 EUR; and €789.00 EUR, respectively.

The Firmware 2.2 update is available for free for owners of all Hydrasynth models; for further information on installation and what is included, download the Firmware 2.2 Pack - including ASM Manager, a changelog, and a Quick Start Guide.
