

Avantone Pro CLA-Sub

Avantone Pro today announces the CLA-Sub, a high-performance studio subwoofer designed for producers, mix engineers, and post-production professionals who demand massive low-frequency extension without sacrificing clarity or truth. The CLA-Sub delivers authoritative bass that remains clean, controlled, and honest at high volume. The CLA-Sub is highly configurable to suit real-world rooms. Users can deploy the sub in either front-firing mode for the cleanest possible reproduction, or downward-firing mode to take advantage of floor coupling for an additional +3 dB of output. Reposition-able vibration-damping feet reduce mechanical coupling and sympathetic resonance, eliminating the need for aftermarket isolation solutions.

At the heart of the CLA-Sub is an exclusive dual-magnet driver, engineered exclusively for Avantone Pro. Unlike subwoofers that inflate perceived loudness through distortion and harmonic coloration, the CLA-Sub was designed from the ground up to minimize distortion while dramatically increasing output. Its stacked dual-ferrite magnet structure provides exceptional power and control, while a specially selected rigid paper cone delivers fast transient response with minimal overtones - resulting in a loud, clear, and trustworthy low end.

Avantone Pro introduces CLA-Sub Studio Subwoofer

Wednesday, 14 January 2026 18:37

Flexible studio integration is further supported by a sweepable Subwoofer High Cut crossover (50Hz - 180Hz), selectable Thru Low Cut filters (80/100Hz) for connected monitors, plus onboard Phase and Volume controls. Locking XLR / 1/4" TRS combo inputs ensure secure connections - even under extreme low-frequency output. A Bypass Footswitch input allows for instant A/B comparison - with and without the sub, and a switchable Auto-Standby mode places the CLA-Sub into low-power sleep after 30 minutes of inactivity. With the CLA-Sub, Avantone Pro delivers bass that moves air, reveals detail, and respects the integrity of any mix.

The CLA-Sub will be available for pre-order beginning January 14, 2026, and is shipping to Avantone Pro's global network of dealers and distributors in April 2026 with a US MAP of \$1,299.00 USD and an EU SSP of €1,729.00 EUR.
