Baby Audio Tekno Expansion Packs

Dark minimal techno, grinding modern industrial and blown-out hyperpop: Baby Audio have just released three expansion packs for Tekno, their flagship drum synthesizer. Owners can enjoy new, hard-hitting preset kits, but non-owners of Tekno get something too: The packs all feature one-shot samples of all preset voices, giving you access to Tekno's desired virtual-analog circuits whether or not you own the plugin.

Tekno's debut preset collection explores untamed sonic territory far beyond the original factory presets:

- Hyperpop: Inspired by the maximalist aesthetics of Charli XCX, SOPHIE, and 100 gecs, Hyperpop supercharges Tekno with blown-out kicks, metallic snares, and synthetic percussion designed to cut through the high-gloss sheen of modern electronic pop. Created by esteemed producer and sound designer Galen Tipton, the pack delivers unapologetically loud and distorted drums for hyperpop production.
- Modern Industrial: A must-have for producers of experimental electronic genres or game and film composers. HydraTek’s expansion brings you deep and sharp cinematic one-shots that push Tekno’s virtual circuits beyond analog nostalgia and into a futuristic universe. Get cold and dystopian drumscapes that cut through your productions with high-resolution low end, intentional distortion and metallic transients.
- Teknocore: Teknocore explores the dark and gritty sides of Tekno’s namesake genre.From minimal hardcore to deeply experimental electronics, the pack gets into sonic territory far beyond the scope of the original factory presets. If you’re looking for Tekno to live unapologetically up to its name,
