Behringer BMX

There’s a sound that defined an era. Raw. Punchy. Unmistakably bold. Today, that sound returns - rebuilt for modern studios but faithful to the character that made classic drum machines legendary. Introducing the Behringer BMX: At its core, BMX delivers authentic analog drum voices, each one carefully recreated to capture the weight, snap, and attitude producers fell in love with decades ago. No shortcuts. No modeling. Just real analog circuits doing what they do best.

Driving those voices is a true 12-bit DAC signal path, preserving the gritty resolution, natural punch, and musical saturation that made early digital-to-analog drum machines hit so hard. It’s not “lo-fi” - it’s the right kind of hi-impact. But BMX isn’t stuck in the past. Modern sequencing, rock-solid timing, and contemporary connectivity bring that classic sound straight into today’s workflows - whether you’re syncing hardware, producing in the box, or performing live.

Why BMX stands apart:

- Genuine analog drum voices with unmistakable character
- 12-bit DAC architecture for authentic punch and texture
- Tight, modern sequencing with hands-on control
- Built for studios, stages, and serious beatmakers

From crushing kicks to razor-sharp snares and explosive toms, BMX doesn’t imitate history - it revives it. If you’ve been missing drums that move air, cut through mixes, and feel alive - this is your machine. The sound is back - and it hits just as hard as you remember.
