

beyerdynamic AVENTHO & AMIRON Families

beyerdynamic is set to unveil three new headphone models at the International Radio Exhibition (IFA) in Berlin. The brand-new additions are precisely tailored to the different needs of users. While the AVENTHO 200 proves to be a flexible companion for frequent travelers, the AMIRON 200 delivers motivating sounds for runners and active sports enthusiasts. The range is rounded off by the new AMIRON ZERO, which appeals to style-conscious early adopters with its innovative clip design.

The AVENTHO 200 is a versatile companion for at home and on the go. Whether relaxing with the favorite playlist, traveling, or for professional purposes, the wireless over-ear headphones from beyerdynamic adapt to everyday life and offer the ideal balance of functionality, comfort, and outstanding sound quality at any time. The 45mm dynamic driver inside the headphones provides a solid foundation for powerful sound, delivering defined highs and rich bass. Depending on whether they want to focus on their work or be aware of their surroundings, users can seamlessly switch between active noise cancellation (ANC) and transparency mode.

The AVENTHO 200's microphone provides excellent clarity for mobile meetings or phone calls. The integrated Qualcomm cVc technology ensures professional call quality even in noisy environments such as crowded trains or busy airport gates. Background noise is consistently filtered out, allowing the speaker's voice to be heard clearly and distinctly.

To live up to its claim of being a versatile everyday companion, the AVENTHO 200 relies on the usual high-quality materials: the individually adjustable ear hooks are made of sturdy aluminum, while the memory foam headband with integrated

fontanelle recess optimizes wearing comfort. The ear pads can be replaced and reordered, extending the life of the over-ear headphones. When folded, the AVENTHO 200 fits into any luggage - ideal for longer trips and mobile use.

The durable design philosophy also extends to the battery, which is easy to replace. Users simply need to remove the ear pads, open the battery compartment, and take out the battery. Even after intensive use, the impressive battery life of up to 63 hours (without ANC) is retained, providing users with long-lasting performance they can rely on. For even greater flexibility between private and professional use, the AVENTHO 200 can be paired with both a laptop and a smartphone simultaneously via Multipoint Bluetooth 5.4. In addition, Google Fast Pair enables a particularly fast and uncomplicated connection.

With the AMIRON 200, beyerdynamic is launching open true wireless earphones that have been specially developed for runners and active sports enthusiasts. Thanks to its feather-light and ergonomic ear hook design, the earphones sit securely in the ear even during longer training sessions without causing pressure points. The open design serves an important purpose: users can listen to motivating beats while still being aware of their surroundings. This is a factor that should not be underestimated, as it ensures greater safety, especially when running in urban environments.

The AMIRON 200 delivers a dynamic sound that is characterized by exceptionally rich bass. To skip to the next song or answer a call, users can rely on the intuitive touch controls. A tap on one of the earphones is enough to resume listening without interruption. The AMIRON 200's two microphones ensure clear voice and call quality by consistently filtering out distracting ambient noise via ENC.

Intense workouts and outdoor use don't bother these open True Wireless earphones. They are IP54-rated for protection against dust and splashes, making them robust enough for city runs or trail runs in any weather. The battery lasts up to 36 hours. And if the users need a quick boost, the fast-charging function provides enough power for a 90-minute run through the park in just five minutes - with the right sound to match their pace.

The extensive launch is rounded off by the first open true wireless clip-on earbuds from beyerdynamic. The AMIRON ZERO combines the elegance of a modern accessory with the performance of a first-class earphone - for serious sound and outstanding wearing comfort. With its C-shaped design, it gently wraps around the ear and distributes its low weight of only six grams per earbud to avoid straining the ear canal. The ergonomic clip earbuds sit securely in the ear and deliver impressive sound quality.

Whether users need to ensure they don't miss any announcements at the train station or want to communicate with cashiers while shopping, the open sound concept of the AMIRON ZERO allows for natural perception of the surroundings while delivering precise highs and fine bass with minimal sound loss. The AMIRON ZERO

can be individually configured via the beyerdynamic app. And like the other two new additions, the AMIRON ZERO also features touch controls that make it easy to use in a wide variety of situations.

The innovative true wireless clip earbuds immediately stand out, not least because of the materials they are made from. The AMIRON ZERO is not only stylish, but also extremely resistant to dust and splashes (protection class IP54). The high-quality workmanship extends to the charging case, which is equipped with a metal hinge that underlines the elegance of the earbuds. In combination with the charging case, the AMIRON ZERO has a battery life of up to 20 hours, making it a stylish companion for everyday use.

“With the launch of our three latest models, we are demonstrating that beyerdynamic has every use case in mind,” explains Borja Tena, Director of Products & Design at beyerdynamic. “Whether it’s frequent travelers, ambitious athletes, or style-conscious first movers - we offer the right model for every audience in the proven high quality they expect from beyerdynamic.”

Availability and Pricing:

- AVENTHO 200: €249 / available in black and nordic grey
- AMIRON 200: €179 / available in black, white and sport
- AMIRON ZERO: €149 / available in black, white and sport

The three new additions will launch in Q4 2025 via the online shop, on Amazon and in retail stores. Replacement parts and ear pads can be reordered separately.
