

# beyerdynamic DJ 300 PRO X CLUB

beyerdynamic introduces a new DJ headphone, available in two versions. While the DJ 300 PRO X embodies a clean, focused aesthetic, the stylish CLUB edition stands out with a bold, distinctive design. Both models can be used as on-ear and over-ear headphones, giving DJs full freedom when producing and performing. The ear cups of both versions can also be customized with unique designs via the beyerdynamic online configurator. The DJ 300 PRO X and DJ 300 PRO X CLUB will make their public debut at the Amsterdam Dance Event (ADE).

The new DJ headphones from beyerdynamic represent flexibility and individual expression like no other. Thanks to their unique 2-in-1 system, the modular design can be transformed from on-ear to over-ear headphones in just a few simple steps. Users simply swap the included ear pads for either configuration. No matter which option they choose, the ear pads ensure long-lasting comfort in every situation.

Being able to switch freely between both designs offers several advantages: While the on-ear design is ideal for gigs where freedom of movement is key, the over-ear option provides the foundation for focused, well-shielded music production and pre-listening sessions. Instead of switching between different headphones for different tasks, DJs and music creators can use the DJ 300 PRO X and DJ 300 PRO X CLUB for their entire workflow.

Inside, a dynamic 45-mm driver delivers rich bass, clear highs, and powerful sound that remains clean and controlled even at high volumes. The driver exceeds the standard size of many DJ headphones, offering superior detail and precision. Kicks, hi-hats, and percussive elements cut through clearly, giving full control during cueing and seamless transitions in the mix. The cable can be connected on either side and securely locked with a bayonet mechanism. Because it can also be detached directly from the ear cup, handling noise and structure-borne vibrations are effectively minimized. Thanks to the angled cable plug, which provides a strain-free connection, users can focus entirely on their performance, even during the most energetic sets.

beyerdynamic offers this versatile all-rounder in two versions, each with its own design focus. The DJ 300 PRO X is aimed at professional DJs who prefer a minimalist,

understated look. The DJ 300 PRO X CLUB, on the other hand, bridges the gap between serious studio sound and eye-catching street style, adding a bold touch to any setup. With its silver fork and orange CLUB lettering on the ear cup, it stands out from classic DJ headphones. But that's not all: Using the beyerdynamic online configurator, the ear cups of both versions can be personalized, whether with a logo, a custom design, or a favorite motif. Users can unleash their creativity and even upgrade their headphones later with their own custom ear cups.

Both DJ headphones are crafted from beyerdynamic's signature high-quality materials, making them durable companions on the road. In line with the company's sustainability philosophy, the ear pads, headband, and cable are replaceable and available as spare parts. The foldable design allows the headphones to be quickly and easily stowed away, ready for the next gig in a club, at a festival, or in a rooftop bar. The included carrying pouch keeps the DJ 300 PRO X and DJ 300 PRO X CLUB safe and protected wherever their music takes them.

"The DJ scene is as diverse as the music that gets us dancing. That's why our latest DJ headphones come in two versions – one sleek and one striking," explains Kevin Nietsch, Product Manager at beyerdynamic. "We're particularly proud of our unique 2-in-1 system, which makes the headphones a truly versatile tool. And for those who want to go one step further, our customizable ear cups offer the chance to make a personal statement."

The DJ 300 PRO X and DJ 300 PRO X CLUB will be available from October 22, 2025, at a recommended retail price of €199.00 in the beyerdynamic online shop, on Amazon, and through authorized retailers. The new DJ headphones will make their public debut at the Amsterdam Dance Event (ADE), taking place in the Dutch capital from October 22 to 26. beyerdynamic will showcase the DJ 300 PRO X and DJ 300 PRO X CLUB at the ADE Lab Village in Amsterdam's Westerpark, where the Gear Test Lab will also be located.
