

Black Lion Audio PBR XSplit8

Black Lion Audio announces the release of the PBR XSplit8, a premium 8-channel passive XLR mic splitter engineered for pristine audio fidelity and absolute reliability in studio, stage, and live sound environments. Featuring transformer-isolated outputs with custom made Black Lion Audio transformers, ground lift switches, and rugged boutique components, the PBRXSplit8 is built to perform - and protect - under pressure.

At the heart of the PBR XSplit8 lies a simple but critical promise: send clean, consistent signals to multiple destinations without introducing hum, buzz, or signal degradation. Each of the unit's eight front-panel XLR inputs feeds a direct output and a transformer-isolated output, allowing users to simultaneously send mic signals to FOH mixers, IEM systems, recorders, or interfaces with confidence and clarity.

Where other splitters can introduce impedance mismatches or suffer from phantom power misrouting, the PBR XSplit8 uses custom Black Lion Audio transformers to maintain correct output impedance and prevent accidental damage to sensitive gear. Only direct outputs carry phantom power, while isolated outputs are strictly signal-only - a critical safeguard in unpredictable live setups.

Engineered with working professionals in mind, the PBR XSplit8 features gold-plated XLR connectors and per-channel ground lift switches to eliminate ground loops and ensure rock-solid connections. Housed in a rugged 1U rackmount chassis, it's designed to handle the rigors of touring and daily studio use. Black Lion Audio's signature build quality shines through, with every unit assembled using WIMA capacitors, Vishay resistors, and carefully selected components for long-term durability and uncompromising signal transparency.

Whether you're tracking a live session while feeding FOH, splitting vocal mics to IEMs and consoles, or routing parallel signals for dual-path recording, the PBR XSplit8 makes complex routing easy and reliable. From churches and venues to mobile rigs and high-end studios, it's the indispensable utility tool that delivers clean results every time.

Key Features

Black Lion Audio unleashes PBR XSplit8

Monday, 19 May 2025 18:29

- Passive 8-channel XLR mic splitter
- Transformer-isolated XLR outputs to protect connected gear
- Front panel ground lift switches per input to eliminate unwanted noise
- Purpose-built, USA-made Black Lion Audio transformers for superior isolation and minimal signal loss
- Gold-plated XLR connectors for secure, reliable connections
- 1U rack-mountable design for easy integration into any setup
- Built tough to handle life on the road with premium Black Lion Audio components

The PBR XSplit8 will begin shipping through Black Lion Audio's global network of dealers and distributors in June 2025 with a US MAP of \$799.00 USD and an EU SSP of €1,065.00 EUR.
