

Bogren Digital IRDX Studio

IRDX Studio is a free IR loader, and it even comes loaded with a curated selection of premium IRs to get you started. Finding your perfect cabinet tone has never been easier - and for free. Blend seamlessly between up to five IRs with the graphical mixer. Shape each IR with individual EQ, phase, and resonance controls for each mixer slot. The secret weapon of IRDX Studio. Fly through thousands of IRs in seconds, curate favourites, hide duplicates, and find recently used. With our unique IR preview mode, you can get an instant idea of how any IR will sound without even loading it up. Never feel overwhelmed by IRs again. IR comparisons become a breeze with the dedicated Audition Mode. Focus in on the perfect IR to add to the mix without affecting your blended sound.

Like tape saturation, the IRDX effect may seem subtle at first. But when comparing engaged versus bypassed, here's what you'll notice:

- **DISABLED:** Each note and chord sounds similar, and the guitar part seems two-dimensional and lifeless.
- **ENABLED:** Your sound takes on a third dimension and reacts realistically, as if you were playing through a real speaker cab.

Not all IR loaders are equal. Some will trim your IRs, add EQ by default, or even resample your high-resolution IRs to a lower quality. IRDX Studio is truly transparent, allowing you to hear your IRs exactly as they were meant to be heard. Get riffing straight away, as IRDX Studio comes with the Bogren Digital IR Demo Pack already installed. The Demo Pack includes some of our most inspiring IRs, taken from our full IR packs. Export even the most intricate IR setup as a single .wav file to use in any hardware unit. With export presets for many of the most popular modelers, you don't need the know-how to know how.

They look similar, they have the same name, so what's the difference? IRDX Studio is a complete IR library management tool and IR loader. IRDX Technology is one small part of the plugin, elevating the sound of the IRs you load from 2D to 3D. IRDX Core distills this down to the core IRDX Technology part. IRDX Core is designed to be placed right after your favourite (non Bogren Digital) amp sim in your signal chain. This way, you can breathe new life into your amp sim with the simplest workflow possible.
