BOOM Library Remastered: Cinematic Metal – Construction Kit

BOOM Library today announces the release of Cinematic Metal – Construction Kit (Remastered), a powerful update to one of its most popular legacy titles. One of BOOM's earliest releases, Cinematic Metal features a vast collection of metallic hits. It has been a favourite of sound designers working in top movies, TV, and games for over two decades. The Remastered version is a sharper, cleaner, and more user-friendly version of the classic library, refreshed to meet today's sound design demands.

Owners of the original Cinematic Metal – Construction Kit or the Cinematic Metal – Bundle receive the Remastered edition free of charge. They can download it in the LOADER application. This reflects BOOM Library's long-standing commitment to supporting audio professionals who rely on its tools every day. The Cinematic Metal – Designed version remains unchanged.

The Cinematic Metal – Construction Kit Remastered includes a wide range of refinements:

- Filenames follow current UCS conventions.

Phoca PDF

- Updated stereo versions of the original files.
- All variations consolidated into a single long file for streamlined browsing and consistency with other Boom Libraries.
- Removal of “P3” sounds.
- Systematically denoised and gain-aligned to reduce prep time in post
- Updated metadata for faster, more accurate searches.

Cinematic Metal has been described by one top sound designer as “An excellent, excellent collection. With the Cinematic Metal library, you could almost do any high-end trailer with those alone.” The Remastered Construction Kit builds on that legacy with numerous workflow improvements, cleaner presentation, and refined audio fidelity.

For new customers, Cinematic Metal is available at 20% off until March 9th 2026. The prices are:

- Regular price: Designed: $139/119€ | Construction Kit: $209/179€ | Bundle: $265/229€
- Launch offer: Designed: $111.20/€95.20 | Construction Kit: $167.20/€143.20 | Bundle: $212.00/€183.20

BOOM Library remains focused on the needs of professionals. As a company founded and run by working sound designers, its mission is to ensure that the libraries it provides are not only trusted at release but continuously improved to serve real production needs.
