

BOOM Library MAGIC - ALCHEMY

BOOM Library, a company with expertise in high-quality sound design resources, announces the release of MAGIC - ALCHEMY, the latest entry in its acclaimed Magic series. Inspired by the reactive world of magical chemistry, this new sound effects library was recorded in a real, makeshift laboratory and is designed to bring character-rich, short-format magic to professional sound designers in games, film, audio drama, and beyond.

MAGIC - ALCHEMY complements BOOM's existing titles Arcane Forces and Wisp, but with a focus on tighter, faster, and more naturally recorded magical elements. Rather than cinematic blasts or ethereal swirls, this new library captures the grounded sonic chaos of bubbling potions, fizzing tinctures, sizzling spell reactions, and carefully layered enchantments.

"I wanted each sound to have personality - not just another fire burst or whoosh," said Fabio Coressel, the project lead behind MAGIC - ALCHEMY. "So we built a lab right in the studio. I spent days in goggles, experimenting with alcohol burns, gas tubes, chimes, and chemical reactions. The result is something that feels alive, tactile, and truly magical."

The library includes both a Construction Kit of raw, cleanly recorded elements and a set of Designed sounds for instant integration. All Designed assets are categorised into Holy, Cursed, or Neutral, helping audio professionals quickly match the emotional tone of their scenes or interactive events.

Key Features

- Real-World Chemistry: Sounds captured through actual fire, water, and chemical reactions in a custom studio lab setup.
- Designed for Usability: Short, dynamic sound effects tailored for game asset creation, trailers, fantasy interfaces, and more.
- Multiple mic perspectives: Close, mid, and far for spatial flexibility
- Dual Format: Includes Construction Kit (CK) with natural, unprocessed recordings, and Designed sounds for immediate deployment.
- Emotionally Tagged: Holy, Cursed, and Neutral categories allow precise matching of tone and context.
- Dry and Flexible: Designed sounds are hyper-processed but dry - perfect for mixing into dense audio environments without clutter.

Specifications:

- Construction Kit: 684 stereo WAV files (96kHz/24-bit)
- Designed Sounds: 101 stereo WAV files (96kHz/24-bit)
- Download Size: 10.8 GB (CK), 1.6 GB (Designed)
- File Format: WAV, embedded with full metadata
- Licensing: Royalty-free for commercial use

MAGIC - ALCHEMY is available now directly from the BOOM Library website. Customers can purchase the Construction Kit, Designed bundle, or a discounted combined edition.
