Celemony Melodyne 5.2 now native on Apple M1

In its new Version 5.2, Melodyne now supports both Intel chips and the new M1 processors on Apple computers allowing Melodyne to run natively on the latest Macs and take full advantage of their power. This applies to all editions of Melodyne, whether in stand-alone mode or as a plug-in – also via ARA – in almost all compatible DAWs. Melodyne 5.2 contains numerous improvements and bug fixes for macOS and Windows and for operation in all DAWs. Celemony, therefore, recommends the update to all users. The following improvements were made:

- ARA: Improvements in the playback functions, selection, cache management and blob monitoring.
- Operation: Minor improvements in the scale functions, optimizations and bug fixes in all areas of the user interface.
- Compatibility: Optimized operation in all DAWs, correct assignment of file
