

Celestion G12-100 Raven

At this year's Winter NAMM 2026, Celestion, a manufacturer of guitar and bass loudspeakers, unveils the new G12-100 Raven guitar speaker. Engineered specifically for the modern metal player, the Raven is the harbinger of Celestion's most aggressive sound yet, combining the brand's legendary tonal integrity with a groundbreaking lightweight design. The Raven is defined by its ability to deliver the heaviest of modern metal tones, while remaining light as a feather. At the heart of this innovation is a reimagined ceramic magnet assembly. The new-design motor structure massively lowers the speaker's overall weight -- to just 2.5 kg (5.5 lbs.) -- without compromising the huge magnetic forces required to power such a gargantuan tone machine.

Built for devastating power, the 12-inch diameter Raven features a formidable 100W power rating, a 2-inch voice coil and offers 100dB of sensitivity. This combination allows it to handle the most extreme high-gain lead lines and seismic low-end riff-work with ease. Its tonal signature offers a detailed mid-range punch, brooding highs, and a firm, authoritative low end. The treble is meticulously voiced to be articulate without ever becoming brittle or harsh.

"The G12-100 Raven is more than just a speaker; it's a tool for players to dominate the stage," says Celestion Head of Marketing Ken Weller. "By reimagining the ceramic magnet structure, we have created a driver that delivers the massive heft metal players demand without weighing down their cabinets. It's an innovation that
