Cordial ECOCORD FM 234 TOP

With ECOCORD FM 234 TOP, CORDIAL introduces a new solution for professional microphone cabling in studio, broadcast and live applications. The ready-made cable is equipped with high-quality NEUTRIK XLR connectors and is complemented by the corresponding CMK TOP 234 ECOCORD bulk cable for custom configurations. The development focused on a practical design to ensure reliable signal transmission under demanding conditions. A precisely engineered internal structure provides high electrical stability and consistently interference-free signal routing – including a particularly dense shielding construction for effective suppression of EMI and RFI disturbances. At the same time, the cable remains flexible and robust enough for mobile use as well as fixed installations.

For the outer jacket, the conventional material PVC is replaced by fully recyclable TPE-V. The technical properties and electrical performance remain completely unchanged. ECOCORD FM 234 TOP is also the first microphone cable in the sustainably oriented ECOCORD product line, expanding the range with a solution for professional audio applications. ECOCORD FM 234 TOP is available in more than ten ready-made lengths ranging from 0.5m to 20m, covering a wide spectrum of typical use cases – from compact studio setups to extensive stage and installation scenarios.
