Dawesome Plugin Native AAX Support

Tracktion Corporation brings good news for professionals working in Pro Tools: the Dawesome plugin lineup is now available with native AAX support on macOS and Windows. This means Dawesome instruments and effects can now be used directly inside Pro Tools - without wrappers or workarounds - and integrate cleanly into established professional workflows. All plugins are now offered in VST3, AU, and AAX formats.

Over recent years, Dawesome has earned a devoted following among cinematic composers, sound designers, and music-for-media professionals. Known for expressive sound design, intuitive control, and a strong focus on musical playability, Dawesome plugins encourage exploration and deliver characterful results - moving beyond static, genre-locked sounds. From evolving textures to emotionally nuanced soundscapes, Dawesome instruments are often chosen when movement, atmosphere, and depth matter most.

With native AAX support, these creative tools are now fully accessible within Pro Tools workflows - from early sketching to final production and delivery. For non-Pro Tools users, existing workflows remain unchanged. To celebrate the release, all Dawesome plugins are available at a 30% discount for two weeks. Updated installers including AAX support are available now via the website below.
