Tracktion KONTRAST | Wavetable: Reinvented

Dawesome/Tracktion announce the release of KONTRAST, a radical new take on wavetable synthesis that turns sound into terrain and brings back the excitement producers have been craving since the early days of Serum and PPG. For over a decade, wavetable synthesis has seen endless refinement - more features, more modulation lanes, more presets. And yet, many producers feel that the spark is gone. KONTRAST is here to change that.

Instead of slicing wavetables with a single straight line, KONTRAST lets you use any shape you want - circles, curves, spirals, even chaotic squiggles. The result: sounds that feel alive, breathing, unpredictable in all the right ways. “Don’t change the wavetable - change how you move through it,” says the team at Dawesome. KONTRAST is not in a feature race. It’s not about stacking more oscillators or FX. It’s about breaking free from the sterile, one-dimensional paradigm and giving producers a playful, intuitive way to create inspiring sounds - fast. Twist. Feel. Done.

Available as VST3 and AU for macOS (Intel & Apple Silicon) and VST3 for Windows, KONTRAST launches October 3, 2025. Intro pricing is $89 / €89 (regular $149 / €149). A bold 90-day free trial lets you explore every corner of its sound-shaping terrain with zero risk.
