EnovaNxt Relax Angel

Switzerland-based Enova Solutions AG is revolutionizing the Pro Audio and MI Industries with its patented «True Mold» technology, seamlessly merging connector components and cables into fully integrated, ready-made solutions. Following the successful launch of various cabling solutions, Enova Solutions is delighted to bring another innovative product to market.

The EnovaNxt Relax Angle instrument cable with a mono 100-degree angled ¼" plug is engineered to over-come the limitations of conventional right-angled cables. Unlike standard 90° right-angle plugs, the 100° angled connector reduces jack strain while offering a more ergonomic cable position. This Relax Angle provides a natural cable flow, preventing stress damage to guitars, pedals, amplifiers, and more. With the patented «True Mold» process technology, the instrument cable merges the individual connector parts and the cable into a fully integrated ready-made-cable. The EnovaNxt Relax Angle instrument cable is available in 5 different lengths (3, 5, 6, 8, 10 meters).

«The Relax Angle instrument cable is another milestone in our young company history”, says Renato Jost, founder and CEO of Enova Solutions. «With the unique, world’s first 100° Relax Angle instrument cable we continue to bring innovative products to the market. »

EnovaNxt XLR Features:

- True Mold: By using only the essential ¼ plug components, True Mold over-comes traditional connector weaknesses for unmatched durability, performance and improved haptic.
- Water / Dust Protection: True Mold Technology seamlessly merges connector and cables into a single, integrated unit, providing superior water

and dust protection.
- Strain Relief: Newly designed 360 degree metal strain relief for an optimized pull-out force.
- Bending Protection: Superior bending protection due to the tapered design, putting an end to drooping cables.
- Premium Instrumenten Cable: Highly flexible low capacitance instrument cable 1 0.22 mm² with optimized shielding, designed for clear and reliable sound transmission.
- Relax Angle: The 100° angled connector is designed to reduce jack strain while offering a more ergonomic cable position.
