Erica Synths Drum Stereo FX & DJ VCF Stereo

The STEREO FX module brings hi-fi stereo effects into the Erica Synths Drum Series. Based on our new DSP engine, the module provides a wide range of custom delay and reverb effects. CV control over various parameters and the ability to save up to 10 presets will make this module an integral part of any performance rack.

Features

- Hi-Fi stereo FX module
- 3 delay and 3 reverb effects

Phoca PDF

- Tap and clock synchronization of delay time
- Delay time divisions and multiplications in sync mode
- 10 preset patches
- CV control over delay time, feedback, and preset selection

The FX is developed in collaboration with the Dutch company 112dB which offers some of the best-sounding VST instruments.

Price: 270 EUR / 329 USD

DJ VCF Stereo

As its name suggests, the Erica Synths DJ VCF STEREO module provides sound treatment functionality typically found on DJ decks – it is fully open when the cutoff knob is at 12:00. When turned counter-clockwise, lowpass filtering is applied and when turned clockwise, highpass filtering is initiated. Additionally, there is a nice-sounding, adjustable resonance parameter. This provides hands-on control over the sound during performances as well as unconventional timbre modulations that are hard to achieve with conventional state variable filters.

Features

- Fully analogue stereo DJ-style VCF
- Manual cutoff and resonance control
- Two cutoff CV inputs, one with an attenuverter

Price: 180 EUR / 219 USD
