Eternal Research Demon Box

Pioneering instrument maker and design studio Eternal Research is set to present the newly refined and production-ready Demon Box during SUPERBOOTH26, taking place at FEZ-Berlin between May 7–9. Visitors can find Eternal Research at Booth Z065 in the ZW Tents area, where the Eternal Research team will offer hands-on demonstrations and direct access to the creators behind the project.

Set within the relaxed, experimental atmosphere that has come to define Superbooth, Eternal Research will cover the sonic architecture and features of Demon Box, a unique and tactile instrument that has been designed to capture electromagnetic fields (EMF) and transform them into raw, sculptable audio, cv and midi. Demon Box beckons artists, producers, and sound designers to delve into a new form of interaction with the invisible sonic environment around all of us, turning ambient energy into a playable medium.

In addition to live demonstrations of Demon Box, the Eternal Research team will be onsite to meet with artists, media, and collaborators, offering insight into the highly iterative development process and the overall philosophy behind the instrument. Meanwhile, SUPERBOOTH celebrates an important milestone, now in its tenth year as a global gathering point for forward-thinking synthesizer brands and the broader electronic music community.

“Superbooth is a special place where sonic ideas are shared and new visions are realized,” said Alexandra Fierra, co-founder of Eternal Research. “We’re excited to meet with those attending to share our final version of the Demon Box in a setting

where curiosity and exploration drive everything.” Superbooth has grown into one of Europe’s leading events for synthesizer culture and beyond, and is known for its blend of indoor exhibits and outdoor installations that foster discovery and collaboration across the electronic music landscape. Attendees are encouraged to visit Eternal Research at Booth Z065 (ZW Tents) to experience the Demon Box and connect with the team.
