EVE Audio SC3010 & SC3012

The professional high-end end studio monitor manufacturer EVE Audio from Berlin, Germany upgrades their main monitors SC3010 and SC3012 with a new generation of highly sophisticated 10” or respectively 12" double coated low resonance metal diaphragm woofer.

These woofers enhance the reproduction of low frequencies with exceptional accuracy and dynamism to 29Hz or rather 25 Hz, enable SC3010 and SC3012 to serve as main monitors without the necessity of an additional subwoofer. The amplifier section features new filter adjustments, with a total amplifier output power of 1300 W transforming them into true powerhouses in studio monitoring. This new silver aluminum woofer membrane is visually striking, accentuating the exceptional reproduction quality of the SC3010 and SC3012.

EVE Audio SC3012

SC3010 and SC3012 feature the largest Air Motion Transformer, RS6, EVE Audio has developed to deliver high sound pressure levels, extremely low distortion, and an optimised directivity. The SMART-knob, which is a trademark of all EVE Audio studio monitors, allows to adjust volume and room parameters such as Low Shelf, Mid EQ and High Shelf filters to be set on front and are precisely displayed by an LED ring. The massive low resonance silver center module housing a 5” midrange driver and AMT RS6 tweeter can be rotated by 90 degrees allowing to set up the speakers
