# Flock Audio PATCH VT

Flock Audio has announced that PATCH VT, the latest entry in its series of game-changing digitally controlled analog patch bays, is now shipping. Initially announced at the 2023 NAMM show earlier this year, PATCH VT features 128-point connections – 64 Inputs X 64 Outputs – in a convenient 3U rack-mount chassis that also includes many of the extended features available in Flock's largest I/O Model PATCH XT. The availability of PATCH VT gives PATCH users even more flexibility for utilizing the system across a wide array of studio and live applications. PATCH VT is available now for a price of $8999.

"The PATCH series was designed from the onset to give users complete control of all of their analog signal processing in a convenient and user-friendly way that would offer the best of both worlds of analog sound quality and digital workflow convenience," said Flock Audio Founder and CEO Darren Nakonechny. "By expanding the range with PATCH VT, our users now have even more options in the series to build a system that suits their needs whether it's in the recording studio or in a live sound application."

PATCH VT Features

- Multi-Patented Flock Audio Matrix Technology for Conversion-Free Sonically
