FLUX:: MiRA 25.07 Service Release

The FLUX:: team announces MiRA 25.07. This new release is dedicated to improving the overall stability and consistency, along with two UX refinements:

- Samplegrabber now benefits from category filters, available in the plug-in’s preferences, to filter the layouts according to DAW. The selection is automatic in some DAWs.
- The frequency-dependent magnitude threshold is now displayed in the Transfer function scope, when reached.

The MiRA 25.07 release is a free update for all users with a valid MiRA perpetual license or active MiRA subscription plan and is available now in FLUX:: Center.
