

GIK Acoustics PIB V2 & Modular PIB Pack

GIK Acoustics has announced the launch of the PIB V2, an upgraded version of its popular Portable Isolation Booth (PIB), alongside the new PIB Pack bundle, offering an all-in-one, modular vocal recording solution.

The PIB V2 represents a significant refinement of GIK Acoustics' original Portable Isolation Booth, now featuring improved acoustic isolation, greater durability and enhanced portability. Offering outstanding broadband absorption to minimize room reflections and external noise, the PIB V2 is perfect for vocal recordings, podcasts,

and voiceover work. The new panels include upgraded hinges, robust clasps, and recessed front plates. Its foldable, freestanding design allows effortless setup, teardown, and easy storage, ideal for professional studios, home setups, or mobile recording rigs.

PIB V2 Features:

- Compact, durable, freestanding, easily stored
- Standard size unfolded: 108cm wide (each panel is 54cm) x 200cm tall
- Standard size collapsed: 108cm wide (each panel is 54cm) x 114cm tall
- Weight: 20 kg
- Available in quality Camira Cara BLACK fabric with beech wood veneer panel
- Customizable with other Camira Cara or Camira Lucia fabrics upon request
- Employs GREENSAFE technology absorption material
Compatible with standard mic stand setups

"The PIB has always been the go-to for precise vocal capture and bleed control, but Version 2 elevates it further," explains Melissa Harris Chambers, Acoustic Designer at GIK Acoustics. "The improved hardware and recessed mounting plates provide a cleaner, more durable finish, delivering the trusted performance engineers have relied upon for years." Building on the PIB V2's enhancements, GIK Acoustics has also introduced the PIB Pack, its ultimate portable recording solution.

This modular package combines two PIB V2 units with a specially designed ceiling panel, creating a larger, better-performing portable sound booth. The extra space allows for a more comfortable workspace for vocal performers, accommodates larger acoustic instruments, and provides ample room for advanced stereo mic techniques. The PIB Pack offers professional-grade sound isolation and broadband sound absorption without the boomy or boxy characteristics of small enclosed booths, and can be set up in minutes, without any permanent installation.

PIB Pack features include:

- Two PIB V2 units and an overhead ceiling panel for comprehensive 180° coverage
- Ideal for voiceovers, podcasts, vocal tracking, acoustic instruments and ADR
- Fast and simple setup and breakdown
- Can combine two PIB Packs for expanded coverage and even greater sound

control

- Size: 110cm wide, 55cm deep, 200cm tall

"The PIB Pack provides unmatched flexibility and professional results at an exceptional value," says Lukas Rimbach, Manager of Sales & Customer Service at GIK Acoustics. "It's ideal for transforming any space into a legitimate recording environment, particularly for creators working in hybrid or non-dedicated spaces."

The PIB V2 is available now, and customers save 15% when buying the bundle. GIK Acoustics also provides free acoustic consultation to help customers select the best setup for their individual needs.
