GPU Audio SDK

The GPU Audio SDK is out now and offers the opportunity to unlock GPU acceleration for audio projects, productions, and development teams. For example, this development kit allows to run 100 instances of Neural Amp Modeler on a single laptop GPU (weaker than the same name desktop model). 13 instances of NAM can be run within a Reaper session, and their tracks can be duplicated 8 times to reach 104 simultaneous instances of the plugin running purely on GPU power.
