

Harrison Audio Flex-10

Adding to an evolving ecosystem of groundbreaking production tools, Harrison Audio announces its new Flex-10 high-performance USB/ADAT audio interface. Able to function as a centerpiece for a compact studio or mobile set up, Flex-10 carries the classic analog character that Harrison is known for - present on countless recordings including landmark albums by Led Zeppelin, Supertramp, Nirvana, The Rolling Stones, Michael Jackson, and more.

The Flex-10 is the perfect desktop production tool, packed with analog mojo and featuring an intuitive, tactile control surface. With two channels of high-performance Harrison preamplifiers, each featuring H-DRIVE real transformer saturation, Flex-10 carries the unmistakable vibe of '70s mixing console right from the input stage. Classic Harrison high-pass and low-pass filters are available on both channels, derived from the filters on the iconic 32 Series consoles - perfect for carving space around input sources and shaping your mix from the very first take. Each channel also includes buttons for line level, 48V phantom power, -20 dB pad, and phase inversion, along with two conveniently positioned 1/4" inputs in front of the interface - enabling easy connections to guitars, basses, vintage synths/drum machines, and other instrument-level sources.

Just like Harrison's renowned 32Classic console, Flex-10 pairs analog heritage with modern digital compatibility. Its next gen 32-bit/192kHz converters ensure pristine audio capture, while its eight channels of ADAT I/O offer expandability for larger recording sessions or integration with other audio tools. Ideal for pairing with

Harrison D510r 500 Series rack and D510UA ADAT interface to create a powerful 10in/12-out hybrid production solution. A fully-featured monitoring section provides two independent monitor outputs; each with dedicated level controls, as well as two high-end headphone outputs for dual monitoring. Flex-10 also includes MIDI I/O over 3.5mm TRS connectors, providing additional control and connectivity for drum machines, synths, and other equipment.

With an extremely user-friendly interface and flexible sonic architecture, Flex-10 is able to move effortlessly between detailed ‘reference’ recordings, warm saturated tones, and everything in between. Flex-10 also makes it easy to integrate outboard gear like compressors, 500 Series modules, or even boutique analog pedal effects with its dedicated balanced insert points on both channels. Perhaps the most visually striking feature on the Flex-10 is its VU meters, which are a useful visual cue during recording or playback of your signal.

Flex-10 comes bundled with the Harrison Creator Pack - a powerful, inspiring collection of premium virtual instruments, plug-ins, loops and samples from Harrison's top-tier partners including Solid State Logic, Slate Digital, Sonible, Loopcloud, AAS, Native Instruments, IK Multimedia, and more. It also ships with a full license for Harrison Mixbus 12, the award-winning, analogue console-inspired digital audio workstation containing Harrison's signature console EQ on every channel, giving users the ultimate foundation of hardware-and-software studio in one complete package.

Flex-10 Features:

- 10 in/12 out USB-C audio interface
- 32 bit/192kHz converters
- 2 x Harrison high-performance mic preamps
- 2 x Hi-Z instrument inputs
- 2 x line level inputs
- 2 x H-Drive transformers circuits
- Classic high pass & low pass filters
- Balanced insert point per channel
- 2 x main stereo outputs
