

HEDD Audio HEDDphone TWO GT

Since 2019, HEDDphones have been trusted by artists such as visionary pianist Nils Frahm, iconic rapper Q-Tip, and Academy-Award winning composer Hildur Guðnadóttir (Joker, Chernobyl) to be reliable day in, day out. Audio engineers like Heba Kadry (Björk) and Tchad Blake (Arctic Monkeys, The Black Keys) celebrate them for their honesty and precision in the process of making records. Now

HEDDphone TWO GT writes the next chapter in this truly unique approach to headphones, taking the speed and fascinating clarity of HEDDphone TWO's Air Motion Transformer driver to the world of modern audiophile listening.

The GT is to the TWO, what a Gran Turismo is to a race car: more comfortable and certainly more forgiving. Whilst HEDDphone TWO was designed to be a cutting-edge engine to deliver fast and exceptional results for audio engineers and producers, the GT adopts the analytical clarity of the TWO, adding a warmer sonic signature and premium comfort experience. Every element of this high-performing product will enhance your ride.

Like its professional counterpart, HEDDphone TWO GT uses a robust, yet ultralight multi-layered Kapton diaphragm that is over three times larger than traditional dynamic, planar or electrostatic driver designs. The new HEDD Air Motion Transformer utilises the latest Variable Velocity Transform technology and produces the lowest ever distortion levels in AMTs across the audio spectrum, from 10 Hz to 40 kHz. Therefore the driver allows for more accurate dynamics and an effortless soundstage. HEDD has combined substantial feedback from the passionate Head-Fi community with our unwavering dedication to improve. The new air-compliance tuning system creates impactful bass, alongside a warmer mid-range and sparkling top end to deliver the emotion within the music. So, meet HEDD's Grandest Tuning to date.

The HEDDphone TWO GT is designed for pleasure, so get ready to lose yourself in your favourite album or playlist. We have engineered the clamping force on the carbon fibre headband to be more comfortable for longer periods, with softer ear pads and the unique dual strap system that can be adjusted and fixed to your preference. To give our customers a choice between different comfort experiences without taking them away from the music, the new ear pads are finished in either velour or sheep leather. The improved cable quality adds to the overall luxurious experience.

HEDDphone TWO GT is all about high-end components & materials. They have designed it to be reassuringly strong. The lightweight magnesium chassis and carbon fibre HEDDband ensure comfortable extended or repeated listening experiences. The company provides ultra high-purity copper cables and all the connectors you will need, so you can dive into your favourite music straight out of the box.

HEDD Audio founder Klaus Heinz has been a pioneer of loudspeaker design for over five decades, including creating the modern AMT driver, which is also the heart of the company's unique headphone range. Their highly skilled assembly team in Berlin hand-builds every HEDDphone to meet the highest standards of quality. Their pedigree in design and construction speaks for itself, but they back that up with a 5-year limited warranty for every HEDD product registered by their customers.

The HEDDphone TWO GT ships with all of the possible cables and connections you

need to connect directly to your favourite amplifier. Every cable is designed for rigorous use and made using a combination of high-purity, silver-plated copper in hand-braided nylon strands. The included travel case provides a sturdy way to store and protect your HEDDphone TWO GT at home or on the move.

Designed specifically with the HEDDphone TWO GT in mind, we have engineered the GTC Upgrade Cable for an even richer and more detailed sound. At 22 AWG thickness it provides lower impedance and unveils even more nuances in the audio. This high purity LC-OFC cable counts no less than 760 strands and requests the highest quality amplifiers to show its true potential. The GTC Upgrade Cable is also compatible with the original HEDDphone® TWO and will secure a podium finish in any high-end collection.

Technical Specifications:

- Concept: Open-back over-ear
- Driver: Full-range Air Motion Transformer (AMT)
- Diaphragm: Multi-layered Kapton polyimide film
- Frequency range: 10Hz – 40 kHz
- Sensitivity: 88 dB/W
- Impedance: 41 Ohm
- Weight: 550g
- Power Requirements: 200mW (minimum), 1000mW+ (recommended)
- Cables: High-purity and silver-plated copper with nylon braids

HEDD Audio introduces the HEDDphone TWO GT

Thursday, 26 September 2024 18:41

- Ear Pads: Velour and sheep-leather

Each HEDDphone TWO GT is assembled in Berlin, Germany.

Box content:

- 1x HEDDphone TWO GT
- Travel case for HEDDphone TWO GT and Accessories
- 2x sets of ear pads finished in velour and sheep leather
- 1x unbalanced cable with 6.35mm termination (1.6m)
- 1x unbalanced adapter, from 6.35mm to 3.5mm
- 1x balanced cable with 4.4mm termination (1.6m)
- 1X balanced adapter, from balanced 4.4mm to XLR

The HEDDphone TWO GT by HEDD Audio will be available in USA and Korea from the 3rd week of October 2024, in all other countries in November 2024. The HEDDphone TWO GT will be shown at CanJam SoCal on 28th and 29th September 2024 at the booth of the first website below. The price for the HEDDphone TWO GT is 2,199.00 USD and 599.00 USD for the GTC Premium Cable.
