IK Multimedia ReSing Doubling

IK Multimedia announces ReSing Doubling, a powerful new add-on for ReSing that automatically generates realistic double-tracked vocals, 3-voice stacks, and ensemble-style vocal arrangements from a single vocal performance. Designed for producers, songwriters, composers, and content creators, Doubling makes it easy to create wider lead vocals, thicker backing parts, and larger ensemble-style vocal arrangements without having to record multiple takes.

Creating polished vocal productions often requires recording and editing multiple performances. Traditional double-tracking workflows involve repeated takes, timing adjustments, pitch correction, level balancing, and stereo placement before a mix is ready. With Doubling, ReSing can automatically generate additional vocal performances from a single voice while preserving the character and timing of the original performance. The result is a faster workflow for creating realistic double-tracked vocals, doubles, and stacked vocal arrangements while maintaining creative control over the final sound.

Users can adjust timing variation, pitch detuning, stereo width, individual voice levels, and panning to create anything from subtle double-tracked vocals to wide 3-voice stacks and larger ensemble-style productions. From natural double-tracked lead vocals to rich backing vocal ensembles, Doubling provides a fast and flexible way to build bigger productions. ReSing for Mac and PC is IK Multimedia's

Phoca PDF

professional AI-powered voice modeling solution for music production. It transforms vocal performances using expressive AI voice models that preserve the emotion, detail, and nuance of the original take. Designed for modern studio workflows, ReSing performs all processing locally on the user's computer, with no subscriptions, credit systems, upload queues, or an internet connection required during production, and supports ARA integration in compatible DAWs, including Pro Tools.

ReSing allows users to:

- Replace vocal performances with professionally recorded voice models
- Transform rough ideas, scratch vocals, and phone recordings into polished production-ready performances
- Convert vocals into instrument performances
- Create and train custom voice models locally
- Work directly inside supported DAWs through ARA integration or as a standalone application

All available voice models are ethically sourced from professional performers through transparent agreements that ensure contributors are credited and fairly compensated.

ReSing Doubling is available now through the IK Multimedia online store and authorized dealers worldwide. ReSing Doubling is available as a separate add-on for all paid versions of ReSing. It is not included with ReSing MAX.
