IK Multimedia ReSing Voices Brazilian Pack

IK Multimedia today announced the ReSing Voices Brazilian Pack, adding eight new Brazilian Portuguese voice models and unlocking Portuguese voice model creation for ReSing users. The company also introduced the new ReSing Singer Showcase, offering a new way to discover, purchase, and permanently own individual ReSing voice models. ReSing is a plug-in and standalone application that enables producers to transform vocals and instruments using a growing library of professional voice and instrument models.

The ReSing Voices Brazilian Pack features eight new Brazilian Portuguese voice models, including six singers and two narrators. The collection provides creators with a versatile palette of authentic Brazilian Portuguese voices for music production, media projects, localization, and content creation. In addition to expanding ReSing's international voice library, the Brazilian Pack unlocks the creation of Portuguese voice models in ReSing Modeler, allowing users to build custom Portuguese-language models while preserving natural pronunciation, phrasing, and expression.

Launching alongside the Brazilian Pack, the new ReSing Singer Showcase lets users browse, purchase, and permanently own individual voice models. Featuring a growing collection of singers and narrators across multiple genres, styles, and languages, the Showcase enables creators to build personalized voice libraries

tailored to their creative needs. Unlike subscription-based voice platforms, it provides lasting access to purchased models while ensuring participating artists are fairly compensated.

ReSing combines local processing, ethical voice sourcing, and permanent voice ownership in a workflow designed for professional creators:

- On-Device Processing - All voice modeling is performed locally on the user's computer, providing complete control over projects and data.
- Voice Ownership - Through the ReSing Singer Showcase, users can purchase individual voice models and keep them permanently.
- Ethical AI - Every ReSing voice is created with the full participation, consent, and compensation of the original artist.
- Professional Workflow Integration - ReSing supports modern production workflows, including ARA2 integration and compatibility with major DAWs such as Pro Tools.

With support now available for English, Spanish, Japanese, and Brazilian Portuguese, ReSing continues to expand, with additional languages and voice collections planned for future releases.

The ReSing Singer Showcase is available now, allowing users to purchase individual voice models and permanently add them to their ReSing library. The ReSing Voices Brazilian Pack is available now as an add-on for ReSing through the IK Multimedia online store or authorized dealers. Individual voice models can also be purchased and permanently added to a user's library through the new ReSing Singer Showcase. The ReSing Voices Brazilian Pack includes 8 Brazilian Portuguese voices and unlocks Portuguese voice model creation.
