

IK Multimedia TONEX Board

IK Multimedia today launches TONEX Board, its most advanced TONEX hardware platform to date and the centerpiece of the expanding TONEX ecosystem. Combining IK's award-winning AI Machine Modeling™ technology with AmpliTube studio-grade effects, dual signal paths, advanced routing, extensive connectivity, and intuitive touchscreen control, TONEX Board puts one of the most advanced and best-sounding complete guitar and bass rigs into an extremely powerful, ultra-low-latency compact pedalboard.

At its heart, TONEX Board delivers the sound, feel, and response of real amps, cabinets, and pedals, with the flexibility to run up to four Tone Models simultaneously across two independent signal paths. Players can combine these with 76 effects from AmpliTube and TONEX, plus all-new processors, using up to 12 effect slots to create everything from streamlined traditional rigs to sophisticated dual-amp, parallel, stereo, and wet/dry setups.

A 5-inch high-resolution color touchscreen and six hands-on controls make building and editing complete rigs fast and intuitive, while flexible performance modes, independent stereo outputs, an assignable stereo effects loop, MIDI, and expression control provide the connectivity and control needed for recording, rehearsal, and

the stage.

Key Features:

- Incredible amp sound - The sound, feel, and response of real amps, cabinets, and distortion pedals, powered by AI Machine Modeling
- Studio-grade effects - 76 total effects, including 51 derived directly from AmpliTube 5, 15 from TONEX, and 10 brand-new studio-grade guitar and bass effects, with more to come
- Complete rig building - Combine up to four Tone Models across flexible dual signal paths with 12 slots and flexible routing
- Effortless control - Intuitive touchscreen editing and flexible performance modes keep everything immediately accessible
- Connect to any rig - Professional routing and comprehensive I/O for amps, FRFR, front of house, studio setups, and more
- A universe of tone - 2,000 Premium Tone Models included, plus tens of thousands more to discover on ToneNET
- A complete, evolving ecosystem - Capture, create, edit, record, perform, share, and expand your sound across TONEX hardware and software.

TONEX Board takes the core technology behind TONEX further with a dual-signal-chain architecture capable of running up to four Tone Models simultaneously, combined with 76 studio-grade effects across nine categories. The effects collection includes 51 processors derived from AmpliTube, 15 from TONEX, 10 all-new effects, and more to come. Up to 12 Tone Model and effect slots can be freely positioned and routed across flexible signal paths to create dual-amp stereo rigs, wet/dry setups, two-instrument configurations, sophisticated parallel chains, and more. From authentic captured amps, cabinets, and pedals to drives, dynamics, modulation, delay, reverb, and creative processing, TONEX Board gives players the freedom to build the exact rig their music requires - all on a single pedalboard.

TONEX Board combines the depth and connectivity of a professional rig with fast, intuitive hands-on control. Its large 5-inch high-resolution color touchscreen provides immediate visual feedback, while six precision push-rotary controls make building and editing complete presets fast and direct. Preset, Scene, and Stomp

modes provide flexible control onstage, from recalling complete rigs and changing multiple settings at once to controlling individual effects directly from the footswitches.

TONEX Board also adapts to virtually any rig or performance environment. Players can split and merge signal paths, integrate external pedals with the movable stereo effects loop, or divide the loop into two independent mono paths. Two independent stereo output pairs (one with balanced XLR connectors), individual output EQ, MIDI, expression control, and four-cable method support provide the flexibility to connect to traditional amplifiers, FRFR systems, recording setups, or directly to front of house (4-in/2-out USB audio interface functionality with configurable routing and direct monitoring will be available October 1, 2026, via a free firmware update). Whether recording, rehearsing, or performing live, TONEX Board keeps the focus on playing rather than programming.

TONEX Board includes 2,000 Premium Tone Models, spanning sought-after vintage amplifiers and essential classics to modern high-gain rigs, pedals, and more. The collection combines the original TONEX MAX library, a selection from the latest TONEX ONE+ Signature Collection, and new TONEX content made exclusively for TONEX Board. Nearly 200 of the included captures were contributed by a curated group of leading TONEX Tone Partners, including, in alphabetical order: Amalgam Audio, Big Hairy Guitars, Core Tone Captures, Drums And Tones, Gitarrenlehreronline, Jason Sadites, Juca Nery, Live Ready Sound, Mad Steex, Massimo Varini, Matt Fig, Passion For Tone, Signal Theory, The Studio Rats, The Tone Shepherd, Tone Factor, Tone Junkie TV, Tone Wars, and XOG. And the included library is only the beginning. Through ToneNET, TONEX Board users can explore more than 60,000 additional Tone Models and presets from IK, Tone Partners, artists, brands, and a growing worldwide TONEX community.

TONEX Board is the centerpiece of the complete, connected TONEX ecosystem. Capture gear with TONEX Modeler, discover sounds through ToneNET, shape and organize them with TONEX software, transfer Tone Models and presets with the dedicated TONEX Board Editor, and record with the TONEX plug-in. Existing TONEX users can import their presets into TONEX Board and pick up where they left off, providing a seamless path from other TONEX hardware and software. And with new content, effects, and capabilities planned through future updates, TONEX Board is built to evolve along with the TONEX ecosystem.

TONEX Board at release includes the following software:

- TONEX Modeler to capture amps, pedals, cabinets, and full rigs
- TONEX software to import, download, and play Tone Models as a standalone or plug-in version
- TONEX Board Editor to transfer existing Tone Models and presets to TONEX Board

Additionally, TONEX Board users will have exclusive access to TONEX Player 2.0

Beta (version 2.0.3), which will offer complete dual-rig editing with all 76 included effects, TONEX Board preset saving, and full bidirectional transfer of Tone Models and presets between Mac or PC and TONEX Board using TONEX Board Editor. Presets created with TONEX Board will be available to share with the community on ToneNET beginning October 1, when TONEX Player 2.1 is officially released. Full real-time editing in TONEX Board Editor will be implemented in Q4 2026. The TONEX Board is now available from the IK Multimedia online store and authorized IK dealers worldwide.
