IK Multimedia iRig Stream Mic Pro

IK Multimedia releases iRig Stream Mic Pro, combining a professional multi-pattern condenser microphone and 24-bit, 96 kHz audio interface for iPhone, iPad, Android, Mac and PC into a single ultra-portable solution for music and content creation. iRig Stream Mic Pro makes it easier than ever for users to share their voice and music With dual mic capsules, iRig Stream Mic Pro offers selectable cardioid, figure 8, omnidirectional or stereo pickup patterns. These patterns range from noise-rejecting to immersive audio, so whether it’s recording a podcast, interview, instrument or ensemble, the sound signal is crisp, clear and detailed with easily adjustable gain and selectable high-pass filter.

Media players, keyboards, mixers, turntables, soundboards and more can all be connected to a convenient stereo 3.5 mm audio input directly into the mic. With its monitoring mix control, it’s easy to blend the direct or recorded audio via the headphone output. iRig Stream Mic Pro is virtually an entire studio setup in one elegant, compact design that can be easily taken anywhere.

iRig Stream Mic Pro offers IK’s groundbreaking Loopback+, letting users not only

add music from a phone or tablet to the recording or stream but even route the mic signal into a separate app to add reverb, EQ or noise-reduction (like with the included MixBox CS for iPhone/iPad) before sending to a second app like Instagram or Tiktok. It’s an easy way to get a massive sound on apps that don’t normally allow audio processing or adding background music. iRig Stream Mic Pro delivers serious sound throughout. A headphone output with direct monitoring lets users check levels with any app before hitting record. And 24-bit, 96 kHz converters ensure pristine, detailed sound for both the mic and stereo aux input.

All the features are controlled via a single, intuitive and live-optimized control knob, so it’s easy to tweak on the fly, even while keeping both eyes on the camera. Users can click through each setting quickly to make adjustments and even hold down to mute a sneeze or cough. And easy-to-see LED level indicators make monitoring possible without headphones, convenient when recording at a distance or at night.

iRig Stream Mic Pro offers 2 modes: stereo or multichannel. By default, it operates in stereo mode and pre-mixes multiple sources of audio - line stereo inputs (+ Loopback) and mic capsules - down to a stereo track, ideal for streaming apps like Instagram, Facebook, Twitch, etc. Switching to multichannel mode, the two capsules are routed to channels 3 and 4 respectively giving users 4 channels of audio to send to recording apps such as GarageBand or a favorite DAW. iRig Stream Mic Pro connects to any device right out of the box and makes it easier than ever to stay connected and charged. With the included mini-DIN to iOS Lightning and mini-DIN to USB-C cables, it comes ready to plug into all the latest iPhones, iPads, and Android devices, as well as Mac and PC. Powered by its host, iRig Stream Mic Pro is also MFi certified so users can charge a connected Lightning device even while using iRig Stream Mic Pro to record with the (optional) DC power supply.

iRig Stream Mic Pro works with any app that records or streams audio or video. To get started, it includes iRig Recorder 3 LE (iPhone/iPad/Android), an easy-to-use, high-quality audio and video recording app; as well as MixBox CS (iPad) and MixBox SE (Mac/PC), a powerful suite of FX including dynamics, EQ, reverb and more to help shape professional quality audio. iRig Stream Mic Pro is shipping now and available from the IK Multimedia online store and from IK authorized dealers worldwide.
